GAIN Report #BK2003

Bosnia-Herzegovina

Food and Agricultural Import Regulations and Standards

Country Report

2002

Approved by:

Paul Spencer-MacGregor

U.S. Embassy Vienna

Prepared by:

Sanela Stanojcic

Report Highlights: This report covers food import rules for Bosnia and Herzegovina, including the Federation of Bosnia and Herzegovina and the Republika Srpska. It includes information on labeling, packaging, food additives, and import procedures. Important points of contact for U.S. food exporters are listed in the appendices.

Includes PSD changes: No
Includes Trade Matrix: No
Unscheduled Report
Vienna [AU1], BK

FAIRS REPORT

"This report was prepared by the Office of Agricultural Affairs of the USDA/Foreign Agricultural Service in Sarajevo, Bosnia and Herzegovina for U.S. exporters of domestic food and agricultural products. While every possible care was taken in the preparation of this report, information provided may not be completely accurate either because policies have changed since its preparation, or because clear and consistent information about these policies was not available. It is highly recommended that U.S. exporters verify the full set of import requirements with their foreign customers, who are normally best equipped to research such matters with local authorities, before any goods are shipped. **FINAL IMPORT APPROVAL OF ANY PRODUCT IS SUBJECT TO THE IMPORTING COUNTRY'S RULES AND REGULATIONS AS INTERPRETED BY BORDER OFFICIALS AT THE TIME OF PRODUCT ENTRY.**"

I. FOOD LAWS

According to the Dayton Peace Agreement, Bosnia and Herzegovina (BiH) is divided into two Entities, the Federation of Bosnia and Herzegovina (F BiH) and Republika Srpska (RS). The competencies regarding the food laws are divided as well and each Entity has its own laws and enforcement mechanisms. There is some commonality between the two systems but there is not yet a common food law at the national level.

Foreign trade and customs policies

Issues regarding foreign trade and customs tariffs are regulated by national level laws, the Law on BiH Foreign Trade Policy and the Law on BiH Customs Tariffs.

The Law on BiH Foreign Trade policy promotes free trade of goods and services. Officially, restrictions and import bans are applied to protect public health and the domestic market against subsidized or dumped products and not to discriminate against imports or the products of a particular country.

BiH has a single ministry in charge for foreign trade issues, the Ministry of Trade and Economic Relations (MOFTER). MOFTER is a “super” institution on the national level, in charge for high-level trade issues such as special agreements on trade with other countries and international agreements. However, MOFTER does not have a mandate to issue food certificates or import permits.

BiH is not a member of the [World Trade Organization \(WTO\)](#), but has started accession negotiations¹. Agreements on free trade were signed with all the former Yugoslav countries². There are also a number of special trade agreements with the European Union and other countries.

Although both Entities have their own Customs Administration within the Ministry of Finance, according to the Law on BiH Customs Tariffs BiH has a single customs policy for imports. The Harmonised System (HS) of commodity description and coding, developed by the [World Customs Organisation \(WCO\)](#), is applied. Customs tariffs for agricultural products range from 0, 5, 10 and 15% (for product specific tariff information, please contact the Sarajevo FAS office listed in Appendix II).

Taxes are applied at the same rates for locally produced and imported goods except for certain imported food products that are subject to the special taxation (a complete list is available from the FAS Sarajevo office listed in Appendix II). The value of special taxes ranges e.g. from 0,10 KM³ for vegetables to 6,00 KM for medicinal herbs (based on the product's weight expressed in kilograms). The value-added tax (VAT) is not being enforced yet.

¹ Bosnia Herzegovina's Working Party was established on 15 July 1999. However, Bosnia Herzegovina has not yet submitted a Memorandum on its Foreign Trade Regime.

² Croatia, Slovenia (enforced), Yugoslavia and Former Yugoslav Republic Macedonia (not yet enforced). The agreements foresee no customs or similar obstacles for imports of products from BiH while imports into BiH will still face tariffs that will be phased out gradually. As of January 1, 2005 trade between former Yugoslav countries will be free of customs duties.

³ The BiH official currency is convertible mark (KM). 1 US\$ values approx. 2.2 KM.

Food safety

While the foreign trade and customs policies are unified at the national level, authorities in the Entities issue import permits and food certificates and regulate food safety.

Responsibility for food safety is shared by the RS and FBiH Ministries of Agriculture, Ministries of Health and Ministries of Trade.

The two Entities' Ministries of Agriculture issue import permits for foods of animal origin, veterinary drugs, seeds, planting material and pesticides. For other products, permits are not required. Both Ministries have Veterinary and Phytosanitary Inspection units that issue certificates. The inspections take place at border crossings.

The two Entities' Ministries of Health have Sanitary Inspection units responsible for the wholesomeness of imported foods. Inspections take place at border crossings or, more commonly, at the customs clearance point.

Finally, the Entities' Ministries of Trade Market Inspection units are in charge of quality control for imported foods. They inspect imported food products at the customs point and food in retail distribution.

Both Entities in BiH have inherited and still use some food laws from the former Yugoslavia.⁴ However, future food laws and regulations will likely be harmonized with European Union (EU) directives⁵.

The following laws and regulations are relevant both for locally processed and imported foods:

- The Law on Sanitary Correctness of Food and Goods of General Use (taken from Yugoslavia Official Gazette 53/91) - the law is applicable to all goods processed locally and imported, including raw-materials for foods, spices, additives, processing equipment, wrapping material as well as tobacco and products. It regulates both food hygiene (subject to the specific ordinances regulating presence of pathogenic microorganisms, parasites, pesticides and other contaminants, mechanical residues, changes in food quality due to the physical chemical, microbiological and other processes, expiry date, original package and bulk-packaged foods labeling) and nutritive value (subject to the specific ordinances regulating quality of each type of food). Sanitary inspectors work in accordance to this Law.
- The Market Inspection works in accordance with the Law on Market Inspection (FBiH Official Gazette 2/95, RS Official Gazette 10/97) and Law on Quality Control of Imported and Exported

⁴ BAS is the officially recognized Bosnian standard (Law on Standardization, BiH Official Gazette 19/02). However, when it comes to food ordinances, the former Yugoslavia standard JUS is still in use, but only until December 31 2003, when the BiH will adopt its own standards. The use of BAS standards will not be mandatory unless directed by a separate law.

⁵ BiH has undertaken major political and economic reforms with the goal of eventual accession to the EU.

Goods⁶ (for FBiH - Official Gazette 21/97, for RS - Yugoslavia Official Gazettes 28/75, 70/78, 54/86, 30/91). Quality control for all types of products is being done by visual check-up and for products listed in the above-mentioned Laws (almost everything that is considered as food) additional safety check are done, using laboratory testing on basic ingredients. Visual check up means products identification (origin, type, quantity), labeling and packaging requirements, statement containing the importer's name and address, the product's general appearance, taste, flavor, presence of residues, color, structure etc. Specific ordinances define sampling procedures.

Quality control of imported products can be done again after the import procedure has been completed and prior to retail distribution on the market. Inspection can be done also after the retail distribution.

The quality of individual groups of products is subject to specific ordinances (e.g. Quality of Meat and Meat Products, Quality of Milk and Milk Products, Quality of Honey and Other Bees Products etc).

II. LABELING REQUIREMENTS

(Note: Examples of accepted Bosnian food labels may be found in Appendix III)

The Law on Sanitary Correctness of Food and Goods of General Use regulates labeling requirements for food. According to the Law, a label must be present in both retail and bulk packaged foods and must indicate the following: expiry date, type and content of food additives, type and content of added vitamins, minerals, and other ingredients added to enrich the product's nutritional value.

Labels on foods that have been changed nutritionally for people on special diets must clearly indicate "dietetic food".

Labels must not indicate possible medicinal characteristics of foods.

Producers of cigarettes and tobacco must indicate clearly on packages "Smoking causes health problems", as well as the content of nicotine and tar.

The Law on Quality Control of Imported and Exported Goods says that a label must clearly indicate the name of the product, manufacturer's complete address, name and address of the importer, and important information such as net weight in metric units, ingredients, instructions for use (if necessary) and storage and any important information and warnings.

If an original label is in English (e.g. standard U.S. label) or any other language, the seller is obliged to prepare translated stick-on labels and deliver them together with imported products. It is the importer's obligation is to stick those translated labels on products prior to retail distribution.

⁶ A national level Law on Quality Control of Locally Produced and Imported Goods that will cover the whole BiH territory have been prepared by the MOFTER and will be forwarded to the BiH Council of Ministers for its approval soon

For each type of food product a specific ordinance spells out labeling requirements; e.g. according to the ordinance for Quality of Edible Vegetables Oils and Fats, Mayonnaise and Related Products (Yugoslavia Official Gazette 27/85), a label must clearly indicate the following: 1) product's name and brand name if any, 2) manufacturer's name and complete address, 3) date of manufacturing (day/month/year), 4) "use by" or "best before" date, 5) product's net-weight (mass or volume), 6) used food additives, 7) basic ingredients listed in order of their predominance and type and 8) quantity of ingredients added to enrich product's nutritive value. The label must be noticeable, visible, clear and legible. The product's and the manufacturer's names must be printed in larger fonts (the size of font is not specified).

Labels for margarine and similar products must include the percentage of individual components. If vitamins are added the label must indicate "enriched with vitamins".

If the manufacturing and packaging companies are not the same, the label must indicate the company that did the packaging.

Labels for honey must include its origin (e.g. linden honey, meadow honey) and production method (e.g. comb, liquid, strained honey). If it was imported, it must be labeled "imported honey".

Labels for roasted coffee must indicate its origin and date of roasting.

Meat products must indicate "cooled", "frozen", "heat treated", "sliced", "chopped" etc. and must provide instructions for use and storage if necessary.

If products were artificially colored and preserved by preservatives, it must be indicated right below the product's name, e.g. "artificially colored" or "preserved by preservative".

Claims such as "light" and "reduced" are permitted. However, a general requirement is that labels must not contain words, pictures and drawings and health-related information that could mislead consumers regarding product's origin, quantity and quality [Although pictures of a football player on peanut packages with the claim "exclusively domestic" (peanuts are not cultivated in BiH!) appeared on the BiH market recently.

None of the existing laws/ordinances regulates biotechnology (GMOs) or organic labeling.

Food samples do not need to be labeled.

III. PACKAGING AND CONTAINER REGULATIONS

Packaging requirements are subject to specific ordinances for each type of food.

For example, packaging material for raw coffee packed in ½ kg units must weight less than 50g per square meter. Packaging requirements for fresh seafood products are quite comprehensive and detailed.

However, in most of cases there are no special requirements concerning packaging material and container size. The BiH consumers' prefer larger packages at lower prices.

There are no legal requirements regarding the collection and recycling of used packaging materials.

IV. FOOD ADDITIVE REGULATIONS

Food additives are regulated by the ordinance on “Quality of Foods Additives” (Yugoslavia Official Gazette 39/89). According to that ordinance, additives are substances that are not being used as foods (regardless of their nutritive value), but are added to foods during processing because of their effect on the food's organoleptic characteristics. Substances added to enrich nutritive value and salt are not considered as additives.

Additives and their mixtures can be added to foods if approved and listed in the “Positive List” provided in the above-mentioned ordinance (approx. 500 additives in total). The quantity used must be in accordance with specific regulations for each group of products, and if not regulated – only a minimal quantity that is technologically justifiable can be used. Additives must not affect/decrease product's nutritive value and change significantly taste and flavor of product, unless it was intended. They also must not create toxins in products during the processing, storage and usage. They must be identifiable, which means that their type and quantity in product can be tested, unless they were removed or destroyed during processing. Additive usage generally must be technologically justified.

Additives are divided into 14 groups according to the “Positive List”: 1) antioxidants and synergists of antioxidants, 2) preservatives, 3) flavorings, 4) flavor intensifiers, 5) emulsifiers, stabilizers and coagulants, 6) colorings, 7) anticoagulants, 8) acids, 9) bases, 10) salts, 11) enzymes 12) sweeteners, 13) processing accessory substances (against foaming, for filtration, catalysts) and 14) others. For each of the above-mentioned groups there are specific requirements.

There are also two additional lists in the ordinance: 1) a list of herbs that cannot be used in production of food flavorings and 2) a list of flavorings and other substances with restricted usage (e.g. caffeine).

Additives labels must clearly indicate the following:

- 1) The additive's name according to the “Positive List”, or mixture name, including its usage, and brand name if any,
- 2) The manufacturer's name and complete address,
- 3) The date of manufacturing (day/month/year) and “best before” date,
- 4) The product's net-weight (mass or volume) in metric units,
- 5) Basic ingredients:
 - 5.1 For additives: The basic ingredient (active component) and its quantity in units or percentage compared to product's net-weight. An additive's basic ingredient is its active component. For

flavoring, the origin/type is declared – natural, artificial or naturally identical. Additive carriers (e.g. ethanol) must be declared.

5.2 For additive mixtures: A list of additive names from the “Positive List” in order of their predominance compared to product’s net-weight. If certain additives can be used only in limited quantity, the quantity must be declared

- 6) Name of the country of origin – if imported, except for small packages in retail distribution
- 7) Other information important to consumers

The product’s name and the manufacturer’s name must be printed in larger fonts (not specified). Labels must indicate the company that did the packaging (name and address) if different from manufacturer.

Sodium nitrite, potassium nitrite and saltpeter mixtures used for pickling can appear on the market only in their original packaging, and must be market as “warning – poison!” and “keep in dry place”.

The “Positive List”, the list of herbs that cannot be used in production of food flavorings and the list of flavorings and other substances with restricted usage can be obtained at the FAS office in Sarajevo (see Appendix II):

V. PESTICIDE AND OTHER CONTAMINANTS

Pesticide and other contaminants residues in food

In general, imported food products must comply with domestic rules.

Although BiH is not a member of the [Codex Alimentarius Commission](#), the CODEX maximum residue limits (MRLs) are recognized for imported foodstuffs.

There is a specific ordinance on the residue limits for pesticides and other contaminants, (e.g. hormones, antibiotics and mycotoxins) that can be found in food (the ordinance on “Pesticides and other Contaminants in Food” was inherited from the old Yugoslavia Official Gazette, No. 59/83, 79/87).

According to the ordinance, pesticides are substances used for protection of agricultural products against diseases and pests. Pesticides and their maximum residue limits in food are listed in a special attachment. The list includes 232 different pesticides, their trade names, chemical names and maximum contents in milligrams per kilogram (mg/kg) of food.

Products like spices and food additives can contain 10 times more pesticides than allowed, while tea can contain 5 times more pesticides.

For concentrated and dehydrated products (e.g. milk powder, dried soups) the maximum quantities are being calculated for a product that is used for final consumption (e.g. liquid milk an soups).

Food contaminants are listed as lead, cadmium, mercury, zinc, tin, copper, arsenic, iron and other metals and nonmetals. The ordinance provides a table with the maximum residue limits of the above-mentioned contaminants in 47 different foods expressed in mg/kg of food.

Hormones and antibiotics residues are generally not allowed in food products.

Maximum residue limits of mycotoxins are also regulated for grains, flour, legumes, beans, nuts, coffee, roasted cocoa and peanuts.

The above-mentioned lists are available from the FAS office in Sarajevo (see Appendix II).

Import of Pesticides

Import licenses must be obtained at the Entities' Ministries of Agriculture. The information on approved pesticides and required documents can be obtained from the following address:

1. For the F BiH :

Ministry of Agriculture, Water Management and Forestry
Phytosanitary Department
Mehmeda Spahe 3
71 000 Sarajevo
Bosnia and Herzegovina
Contact person: Selma Sose
Tel. +387 (33) 442 761
Fax: +387 (33) 206 638

2. For the RS:

Ministry of Agriculture, Forestry and Water Management
Phytosanitary Department
Miloša Obilića 51
76300 Bijeljina
Contact person: Aleksandra Popovic
Tel: +387 (55) 401 856
Fax: +387 (55) 472 - 353
E-mail: mps@mps.vladars.net

BiH does not possess a list of approved pesticides, but accepts pesticides that have been approved by neighboring countries, Croatia and Yugoslavia.

VI. OTHER REGULATIONS AND REQUIREMENTS

Regardless of existing ordinances, upon an importer's requests both Ministries of Agriculture issue specific requirements for importing of live animals and products of animal origin (for contact details see

Appendix I). Those requirements are in accordance with the [Office International des Epizooties \(OIE\)](#) requirements.

Food products must be tested for microbe levels at laboratories within the Entities' Institutes for Public Health (see Appendix II). The ordinance on "Microbiological Wholesomeness of Food" comes from the Yugoslavia Official Gazette, No. 43/83 and No. 43/89, and provides maximum content of different microorganisms in food products.

Because of European outbreaks of FMD, BSE, and Classical Swine Fever, both the F BiH and the RS have banned imports and transportation of domestic and wild ungulates and their products from a number of countries, as well as feed containing proteins of animal origin. The United States was not listed in any of the mentioned import bans.

There are specific conditions for import of semen and inseminated cells for artificial insemination that can be obtained at the Entities' Ministries of Agriculture (see appendix I).

Certification and documentation: Live animals, meat and dairy products require veterinary certification, while fruits and vegetables require a phytosanitary certificate issued by exporter's relevant authorities (e.g. USDA/APHIS). Special certification is needed for veterinary drugs, which proves that drugs have been approved and used in the country of origin. Information can be obtained at the Entities' Ministries of Agriculture (Appendix I).

Foods that are subject to veterinary and phytosanitary inspections can enter BiH only at certain border crossings Izacic, Orasje, Raca, Karakaj, Visegrad and Trebinje.

Importers should always inform the relevant Ministry of on the point of entry in order to allow them to fax import permits to the relevant border inspection post.

Inspection services are much more expensive if done after regular working hours and on weekends and holidays.

Transport means and conditions are same as for locally produced food (according to specific ordinances for each type of food).

VII. OTHER SPECIFIC STANDARDS

Organic agriculture: According to domestic agricultural experts, BiH possesses excellent conditions for organic farming. However, the organic agriculture "officially" does not exist in BiH because it has not been regulated by laws (a national Law on Organic Farming is being prepared). The public opinion is that almost the entire BiH agriculture production is organic since an average farm size and yields are rather small, production is more traditionally oriented than commercially and the use of pesticides is lower than anywhere in Europe. There are also few industrial polluters. Therefore, imports of organic food are not welcomed and many farmers and agricultural experts believe that the export of organic

food could be the future of agriculture. In addition, most people in BiH cannot afford imported organic products;

Genetically modified organisms (GMO): No legislation has been implemented so far. However, local authorities, especially those in the RS, oppose imports of genetically modified food products. Two years ago U.S. corn that contained GMOs varieties was characterized as “undesirable” by the RS Ministry of Agriculture and therefore was not imported;

Veterinary drugs: must be on the approved list of veterinary drugs in the F BiH and the RS. The list is available from the Ministries of Agriculture (Appendix I);

Seeds and planting materials: Seeds can be imported only if the varieties are recognized in the country. The List of Recognized Varieties is available at the Ministries of Agriculture. If a variety is not on the list, importers can request its recognition from the Seeds Commission (request forms available at the Ministries of Agriculture, Law on recognition of agricultural varieties F BiH Official Gazette 31/00 and Law on Plant Protection RS Official Gazette 13/97);

Consumers’ protection: A law that should cover both Entities is to be adopted soon;

The Metric system is used in BiH;

Live animals are subject to the ordinance on quarantine requirements for imported animals issued by the Ministries of Agriculture. For ungulates, the required quarantine is 30 days, for poultry and pets 21 day, for semen and inseminated egg cells 14 days;

Alcohol and nonalcoholic beverages, cigarettes - those products are subject to specific taxation rules and require an import license issued by the Entities’ Ministries of Finance. The Ministry of Finance issues control excise stamps to be included into the packaging prior to import into BiH.

VIII. COPYRIGHT AND TRADEMARK LAWS

The Law on Industrial Property Rights (BiH Official Gazette No. 3/02) protects trademarks and brand names. It is a national level law and was adopted recently, in February 2002.

The Law is applicable to foreign producers only if international agreements and conventions, such as the Paris Convention Treaty⁷, have regulated it, and if not – the rule of reciprocity is applied.

⁷ According to the Paris Convention Treaty (Union), nationals of any country of the Union shall, as regards the protection of industrial property, enjoy in all the other countries of the Union the advantages that their respective laws grant. In addition, any person who has duly filed an application for a patent, or for the registration of a utility model, or of an industrial design, or of a trademark, in one of the countries of the Union, or his successor in title, shall enjoy, for the purpose of filing in the other countries, a right of priority during certain period (twelve months for patents and utility models, and six months for industrial designs and trademarks).

Both BiH and the USA are members of the [World Intellectual Property Organization](#) (WIPO) and should respect the Paris Convention Union rules.

Domestic and foreign applications must be submitted to the BiH Institute for Standards, Metrology and Intellectual Property (see Appendix II).

Regarding the licenses for production – the agreement must be signed between the owner/seller and the buyer and must be published in the BiH Official Gazette.

Law on Copyrights is also a national level law and was adopted recently in April 2002 (BiH Official Gazette 7/02).

IX. IMPORT PROCEDURES

Foreign exporters can import food products into BiH using a locally registered office or a local company/shipping agency registered for import activities. It is common for agents to help with food import regulations.

It is important to note that import license requirements differ between the two Entities. Import license/prior approval from the F BiH Ministry of Agriculture is required for imports of live animals and all products of animal origin with more than 2 percent of animal component, veterinary drugs, seeds and planting materials or pesticides. Prior approval is not required for other food products.

In the RS, importers do not need prior approval from the Ministry of Agriculture for meat, preserved meat and milk products, milk powder, ice-cream, cheese, butter, fish, crabs, mollusc, skin, wool and feed (complete list available from the FAS office Sarajevo) if a shipment is accompanied by an international veterinary certificate. For other foods with more than 2 percent of animal origin a prior approval is required (e.g. live animals, semen etc.).

All food products must be accompanied with standard documents that follow each shipment and by health certificates issued by relevant authorities of exporting countries (e.g. veterinary certificate for meat and meat products, phytosanitary certificates for fruits, vegetables, seeds etc.) and are subject to veterinary and phytosanitary inspections at border crossings and sanitary and market inspections at customs points.

Foods of animal origin and veterinary drugs: Import permits are processed at the Veterinary Departments of the Entities' Ministries of Agriculture. Forms are from those departments (see Appendix I).

Seeds and planting materials: Import of seeds and planting materials is regulated by the Law on Seeds and Planting Material (F BiH Official Gazette 55/01, RS Official Gazette 13/97). To obtain an import permit, importers must be registered in the Importers Register that is maintained at the Ministries of Agriculture. Forms for registration and import permit are available at the Entities Ministries of Agriculture, Phytosanitary Departments (see Appendix I):

Sanitary inspectors visually inspect all food for sanitary wholesomeness prior to customs clearance visually and take samples for laboratory tests (Appendix II). Imported goods are held at the customs point until testing is complete.

Market inspectors issue the quality certificates at inspection points (see Appendix I). Quality control inspections are done at the exporter/importer's written request, which should be received at least 24 hours prior to the customs clearance. The request for quality control must be accompanied with basic documents that follow each shipment, translated into Bosnian/Croatian for the F BiH or into Serbian for the RS. The following information must be provided in the documents: type and name of product, country of origin, exporter's name, manufacturer's name, type and number of transport means, port of loading and unloading, total pieces, packaging unit, gross and net weigh and product's quality basic data.

If the same product is imported again, at it has been tested within 90 days, only visual check up is done.

Both Entities have officially recognized laboratories to test imported food products (Appendix II).

If a market inspector rejects an importer's request, goods are stored until the procedure is complete - the inspector can order the return or destruction of goods if necessary at the cost of importer, or can order certain changes prior to customs clearance.

APPENDIX I. GOVERNMENT REGULATORY AGENCY CONTACTS**1. Imports of live animals and products with more than 2% of animal origin, veterinary drugs:**
